

Maybe you weren't
prepared for the recession.

Don't let that happen
with the recovery.

nMetric[®]
Smarter scheduling[™]

www.nmetric.com

The recession has hit manufacturers hard, resulting in layoffs, idle factories, diminished cash flow and disrupted supply chains.

Given all that, we have a few questions for you. What if a recovery started in earnest – tomorrow? How fast could you ramp up to meet increased demand? What could you offer to keep your customers and attract new ones?

Here's how to get ready.

Introducing smarter manufacturing

nMetric® is a new kind of scheduling software that lets you move fast, increase efficiency and turn on a proverbial dime. It directly addresses persistent flaws in the traditional manufacturing process, but in an untraditional way. Instead of trying to control how jobs go through your factory, nMetric lets the jobs control themselves.

The nMetric system turns each order onto a series of Smart Jobs®, driven by small, distributed software objects. Smart Jobs find and book the resources they need to complete themselves on time, including materials, equipment, tools and labor. They understand the relationship between resources and order routing. They know when each operation has to be completed to stay on schedule. And they're aware of their priority relative to other jobs.

Smart Jobs also feed real-time information to the nMetric scheduling system, which uses it to give you an accurate, multi-dimensional representation of factory operations in real time. You can graphically see all work centers, timeframes and jobs, and available labor, material and tool resources. You see precisely what you can and can't do. And be prepared for nearly any situation that arises.

Recover, and then some

nMetric transforms discrete manufacturing into a highly efficient, reliable, demand-driven operation. It lets you respond to customers in record time, keep your promises to deliver and avoid late penalties. You can put your entire supply chain on the same, real-time page and greatly reduce costly supply errors. All of which is highly desirable, whether the economy is receding, recovering or booming.

Call us at 714.424.4400 to arrange a meeting. We're ready if you are.
